

MEMORANDUM

TO: John Corsi

FROM: Mary Harlow, Rocky Flats Coordinator, City of Westminster

SUBJECT: PAM for Building 123

Sorry I am so late getting these comments in. I had to read the draft Decommissioning document before I could make rational comments. Then I realized I missed the comment period.

1. Building 123 is a laboratory building that is still being used. Bio-assays are performed in this building. These Assays are important to the D&D activities at the site. If the analysis must be sent off site there will be a delay in work progression and worker down time awaiting analysis results. Rocky Flats is only one of two labs in the nation that have the capability of measuring Plutonium and Americium in unknown samples.
2. Will the mobile laboratory have the capability of performing Bio-assay?
3. Building 112, the former cafeteria, is being remodeled to make office space for the rad technicians formerly located in building 123..Cost has been determined to be \$100,000.00 What is the savings to the site annually to remove the lab building at the site. Originally, 123 was not scheduled for demolition for ten years. What caused the scheduled to accelerate.
4. Priority of Demolition should be justified to stakeholders so that they can determine how buildings such as this laboratory will save cleanup dollars by their removal.
